PARIO

PARTICLE SIZE ANALYSIS, AUTOMATED

PARIO calculates the particle size distribution by Stokes' law, with a range spanning from 63 µm to 1 µm, finally making it easy to obtain a complete particle size distribution curve, instead of just a few measurements at discrete time points.

It allows for unattended, automated operation, with no interference by lab personnel. Just set it up and come back 8 hours later to a finished measurement with all the data you need.

FEATURES

- Get complete particle size distribution curves
- Calculation of particle size distribution by Stokes's law
- Autonomous operation after measurement start
- Quasi-continuous resolution of particle size distribution
- No physical disturbance of suspension during measurement
- Avoidance of manual reading errors
- Avoidance of manual calculation errors
- Temperature dependence automatically integrated in the calculation of particle size distribution
